

Regulatory Support

CAPABILITY STATEMENT

Regulated entities often operate complex layered infrastructure networks that have a detailed relationship between costs, regulated prices and investment in new infrastructure.

Gravelroad can model these complex environments for cost inputs, charging options and planning for capital investments, typically over the regulated period. Our work in assessing complex networks of infrastructure and their costs and revenues includes telecommunications, electricity, transport, water, ports, postal, petroleum, wheat and rice markets.

WHO WE ARE

Gravelroad brings a unique combination of regulatory, economics and engineering skills to helping regulators and regulated entities understand their business in relation to the regulatory process. We work for the regulator, and for regulated entities, as required.

Starting as an advisory business in engineering, we have added network economics, program management and organisational strategy to our suite of Services with many interconnected on some projects.

WHAT WE DO

Gravelroad can provide expert support including:

- **Modelling** – Provide accurate models of cost, charging options and benchmarking of performance for regulators and regulated entities drive optimal performance.
- **Knowledge Transfer** – When working for regulators or regulated entities, we operate with a client team to transfer knowledge to staff in the modelling and regulatory process and often run tailored training courses for our clients.
- **Independence** – Gravelroad brings an informed balance to the process of setting and managing regulatory processes and pricing which is often poorly understood. The outcome is to ensure consumers do not pay too much whilst ensuring essential infrastructure can be delivered.
